

ISOframe enables assessment of a wide range of isometric tests without the need for additional attachments, racks, or bars – ideal for smaller sports centers or rehabilitation clinics with limited space options.

Each plate is inserted in the ISOframe slot and secured with the pins matched against the bottom side of the EasyBase® for additional safety and prevention of anterior/posterior and lateral plate movements. Assessments of Isometric Mid-thigh pull, Isometric Belt or Front Squat, Deadlift, and others are now performed safer than ever and in the blink of an eye. Your athletes will appreciate the chance to track their maximum output of the most complex movements.

### Technical specifications
